- [Project Spotlight](#) - Burnt rust roof and walls create a stunning building!

What are the hot colors for 2021?

Emerging Color Trends for Exterior Building Design Course

Need help selecting the right color for a roof or wall surface? Watch the seminar on emerging color trends with PPG's Color expert, Dee Schlotter. The 30-minute session explores societal and environmental influences on building design and how these translate into emerging color themes and palettes for modern building design.

Color of the Year

Emerging Color Trends for 2021?

Top trending color themes discussed in our session with Dee identify the use of mixed materials to create hope, warmth, and reassurance in building design. We also discuss the increasing use of natural materials to reinforce a connection with nature.

Based on these trends, we are proud to announce [Rustic Rawhide](#) as our Color of the Year!

Roof Transformation

Stunning Re-Roof Project in Kalama.

A Washington State homeowner selected Steelscape's [Urban Slate](#) to uplift the style of their home and replace an outdated metal roof. This expansive home, built in 1993 and situated in the rolling hills of Kalama Washington, features an original teal green metal roof that is in need of replacement. The replacement of this roof not only provides the opportunity to address the aesthetic issues of the roof system but to update the style of the home for the 21st century!

Port of Kalama Interpretive Center Project

Our [Burnt Rust](#) and [Weathered Zinc](#) finishes were used on this Port of Kalama Administrative Office building to create a truly amazing result! This facility celebrates Kalama's unique place in Pacific Northwest history as a transportation and commercial hub. The center was designed to replicate a traditional waterfront warehouse of the 1800s. Cultural artifacts, memorabilia and replicas of the past will pose life-sized within its walls and bring history alive for its visitors.
