

PROJECT SPOTLIGHT:

THUNDER VISTA P-8 SCHOOL

BROOMFIELD, CO

Serving up to 1,000 students, this 142,000 square-foot school provides a robust environment for students to learn and grow. Seeking to integrate with the golden colors of the surrounding mountain region, the design team used a corrugated wall profile in conjunction with Steelscape's Sedona Rust. This printed rust pattern was used rather than using a true weathered product, which would continue to deteriorate in performance-alleviating the headache of ongoing maintenance by school administrators. Sedona Rust provides the same warm, oxidized glow but is supported by the peace of mind of a complete paint warranty.

Architect: Hord Coplan Macht

Builder: Adolfson & Peterson Construction (AP)
