

# VINTAGE<sup>®</sup>

---

## THE COMPLETE DESIGN GUIDE

---

# WHAT IS VINTAGE®?

---

## **Vintage is a Highly Versatile Finish Offering a Classic, Aged Metal Appearance**

Vintage is the ideal material for metal facades, siding and roofing. The unique appeal of Vintage is its unparalleled color depth, warmth and natural interaction with light. This unique, restrained color complements a broad range of building designs and integrates effectively with other mixed-use building materials including wood and masonry.

**Vintage®**

**Note:** Vintage is a pre-painted metal product - the material used for metal roofs and wall profiles. It reflects both the base steel and the surface coating.

## HOW IS VINTAGE® DIFFERENT?

---

### **Vintage is a Premium Resin Coating, Not Just a Solid Color**

Standard metal roof and wall products typically consist of the base corrosion resistant metal, a primer, and a topcoat which provides the color. Vintage does not have a primer and includes a semi translucent resin topcoat. This singular, translucent layer enables the natural charm of the base steel to be visible. This metallic surface interacts dynamically with light but is restrained by the tinted resin coating to provide a classic, timeless hue.

Despite this aged appearance, Vintage is a durable finish backed by modern technology. Vintage offers a 20-year limited finish warranty and is graffiti-resistant, making it ideal for all applications. Vintage has revolutionized the use of metal in modern architecture and today it skins thousands of structures.

# WHAT TYPE OF PRODUCTS USE VINTAGE®?

---

## Premium Metal Roof and Wall Products

The long-term performance of metal building products is often dependent on two elements; the thickness of the steel used (called gauge) and the quality of the finish. Vintage, a premium coating using high-end fluorocarbon technology is produced on 24-gauge steel. This thickness reflects the industry standard for premium metal roofing and siding products. This enables Vintage to be used on a variety of metal roofing and siding products, including:

### Metal Roofing

- Residential standing seam (including snap lock and snap seam panels)
- High performance and commercial standing seam (mechanically seamed and clip attached)
- Corrugated and through fastened roofing
- Metal tiles and shingles

### Metal Siding and Walls

- Corrugated wall panels
- Flush and smooth wall panels
- Ribbed, hidden fastener wall panels
- Insulated metal wall panels
- Fascia, column, and beam wraps
- Custom fabrication

## IS THAT ZINC?

---

### **No, But Vintage is an Affordable, Durable Substitute**

Thanks to its warm metallic hue, Steelscape's Vintage offers an affordable alternative to traditional Zinc roof and wall products. Due to Vintage's popularity, it is available in many of the same roof and wall product styles as traditional Zinc products. Vintage offers the strength, durability, and recyclability benefits like Zinc, but without the costly price tag, installation difficulty, and variable color aging. Due to its unique resin finish, Vintage offers a more dynamic color throughout the day as the semi-translucent finish interacts with natural light.

# DESIGN SUCCESS WITH VINTAGE®

---

## Your Vision, Our Inspiration

Vintage has been used extensively throughout the US to create stunning residential and commercial structures. These applications have varied from entire building skins, to design accents, to roof surfaces. Vintage's versatile color, in conjunction with the lines and shadow of the roof or wall profile, can be used to effectively articulate a broad range of design visions.

## Stunning Standing Seam Siding

The raised seams create a crisp shadow that accentuates the dynamic color of Vintage. These restrained lines provide an element of surface texture without clashing with other design elements.

Standing seam Vintage siding pairs exceptionally well with wood and stone accents, or effectively integrates roofing and wall planes.

## DESIGN SUCCESS WITH VINTAGE®

---

### The Alternative Texture

Vintage, in conjunction with corrugated or ribbed wall profiles, can add engaging texture to flat wall surfaces. This can serve to break up large flat areas through shadow and dynamic color, or a point of visual distinction.

Vintage is available in a wide variety of ribbed panel designs to fulfill any wall design vision. The two popular variants are exposed fastener or concealed. Concealed fastener panels offer a more economical siding alternative but have visible color-matched fasteners. Alternatively, concealed fastener profiles provide cleaner lines without visible fastener points.

DESIGN SUCCESS  
WITH VINTAGE®

---

## Commanding Classics

The classic hue of Vintage enables it to integrate exceptionally with classic architecture. Its restrained hue complements traditional building materials and Vintage's dynamic color accentuates classic roof lines and building styles.

This classic color can also be used to recreate the charm of years past. Vintage successfully rejuvenates historic sites through its ageless color. Vintage can create a lasting impression without clashing with broader historical themes.

## DESIGN SUCCESS WITH VINTAGE®

---

### Captivating Identity

Vintage's memorable, yet classic color can be used to create a premium identity and memorable shopping experience.

### Small Stimulus

Even a small application of Vintage in concert with other materials and environmental elements can create additional building appeal.

### Dynamic Flat Surfaces

Vintage's dynamic color, which is accentuated when illuminated by natural light, transforms flat wall surfaces. This can create engaging design features from otherwise flat and blocky surfaces.
