What is an FEVE Coating?

FEVE (Fluoroethylene Vinyl Ether) coatings are a family of semi-translucent fluoropolymer finishes engineered for exterior applications. Using a tinted resin rather than a traditional opaque paint film, FEVE coatings keep the base metal visible while adding color, depth, and durability. Engineered with advanced fluoropolymer technology, they resist UV exposure, humidity, and corrosion while maintaining long-term exterior performance.

FEVE coatings deliver a smooth, consistent appearance with a soft metallic sheen that interacts naturally with changing light conditions. As viewing angles and daylight shift, layered tones and underlying substrate characteristics emerge, creating depth, visual interest, and dimension. Steelscape's FEVE coatings provide distinctive options engineered for lasting visual appeal and long-term performance.

VINTAGE®

MORE INFORMATION → Vintage Product Page

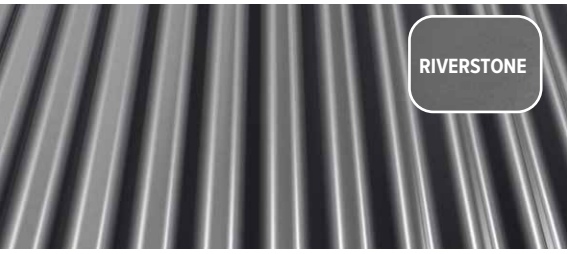
FINISH DESCRIPTION: A warm, aged-metal aesthetic that reveals the metal's natural character beneath. Its rich, layered tones shift with light, creating dynamic visual movement and timeless appeal.

VINTAGE® HERITAGE

MORE INFORMATION → Vintage Heritage Product Page

FINISH DESCRIPTION: Expanding on the original Vintage look, this collection features a printed design beneath the Vintage coating that offers deeper dimension and interest.

Two Patterns Available:
- **Legacy:** A varied mottled pattern creating a spangled effect.
- **Evolution:** A varied brushed pattern creating a striated effect.



RIVERSTONE

MORE INFORMATION → Riverstone Product Page

FINISH DESCRIPTION: A metallic finish that reveals the natural character of its ZINCALUME® substrate. As light shifts, neutral gray tones and subtle depth emerge across the surface, creating a refined metallic appearance.

FINISH	VINTAGE®	VINTAGE HERITAGE®	RIVERSTONE
