

RE: Extraction Site of Raw Materials

Steelscape produces metallic-coated and painted steel coils for the construction market.

The majority of materials used in our standard products, exceeding 99% by weight, are supplied from foreign sources utilizing global extraction sites. Steelscape manufactures its products from hot band coil and we are not able to specify exactly where the iron ore and other base components within the hot band come from. Our hot band is purchased from companies all over the world and they do not separate the iron ore by supplier or keep track of where the components came from. There is likely Australian, Asian, American, and most likely other locations' iron ore all mixed together in the hot band coils we utilize. Therefore, we are confident that any material currently sold by Steelscape was extracted more than 500 miles from any point in the United States.

If you need more information or have further questions please feel free to call me direct at 916-376-2893.

Sincerely,
Steelscape, LLC
